Evolution: A Theory in Crisis By: Michael Denton

The triumph of evolution meant the end of the traditional belief in the world as a purposeful created order - the so-called theological outlook which had been predominant in the western world for two millennia According to Darwin, all the design, order and complexity of life and the eerie purposefulness of living systems were the result of a simple blind random process - natural selection

Evolution and the Triumph of Homology, or Why History Matters

Stephen Jay Gould in In his 1981 book, The Role of Man in Evolution, Gould argues that the triumph of evolution in the scientific community was not the result of a simple theory of biological evolution, but of a complex interplay of sociopolitical factors. Gould maintains that the acceptance of evolution in the scientific community was not due to its inherent explanatory power, but rather to the cultural and political climate of the late 19th and early 20th centuries. Gould's book, like many of his other works, is a call for a more holistic and interdisciplinary approach to understanding the history of science and culture.
